

# Readme

Here we describe how to run basic and star programs

- I hard coded the ip address and port number in both star and basic programs. So there is no need to input it.
- Then do all the steps mentioned in the Assignment 1 doc to start both basic and star programs and there is not need to input server address

## Client Interface

- Clients in both basic and star programs are by default interactive.
- Find mention request either 'G'-GET,'P'-PUT,'D'-DELETE
- And then give necessary input like key,value.
- Don't forget to put quotes around your input.
- You can also directly hard code into client program by using `get(key)`,`put(key,value)`,`delete(key)` functions.

\*Pcaps required in reports are gathered in pcaps folder (in case we may loose them when we clean the folder)
